Århus 1. april 2009

## LiveDigitalCopy™ available at Actura Digital Publishing

As of now Actura Digital Publishing provides their DVD-Video customers the opportunity to apply "Live-Digital-Copy" onto DVDs. This enables the end users to view movies without a DVD on mobile devices like cellular phone, iPod or PlayStation Portable.

With the LiveDigitalCopy™ (LDC) software it is possible to transcode the feature film or specific parts of the DVD into an other digital format - while controlling the usage rights and preventing unauthorized duplication. The rights owner can define how many digital copies are granted to the user and which output devices are allowed. The devices can be - for example PCs, portable video player, cellular phones or game consoles.

The dynamic "Live-Digital-Copy" feature works also with standard CSS-protected DVDs. LiveDigitalCopy™ does not require any changes on the original master and can be applied to every regular DVD-Video. Furthermore the software supports multiple audio languages and subtitles.

LiveDigitalCopy™ has been developed by the copy protection specialist Protect Software GmbH with whom Actura Digital Publishing (CDA Datenträger Albrechts GmbH) has a long-term cooperation in copy protection mechanisms.
